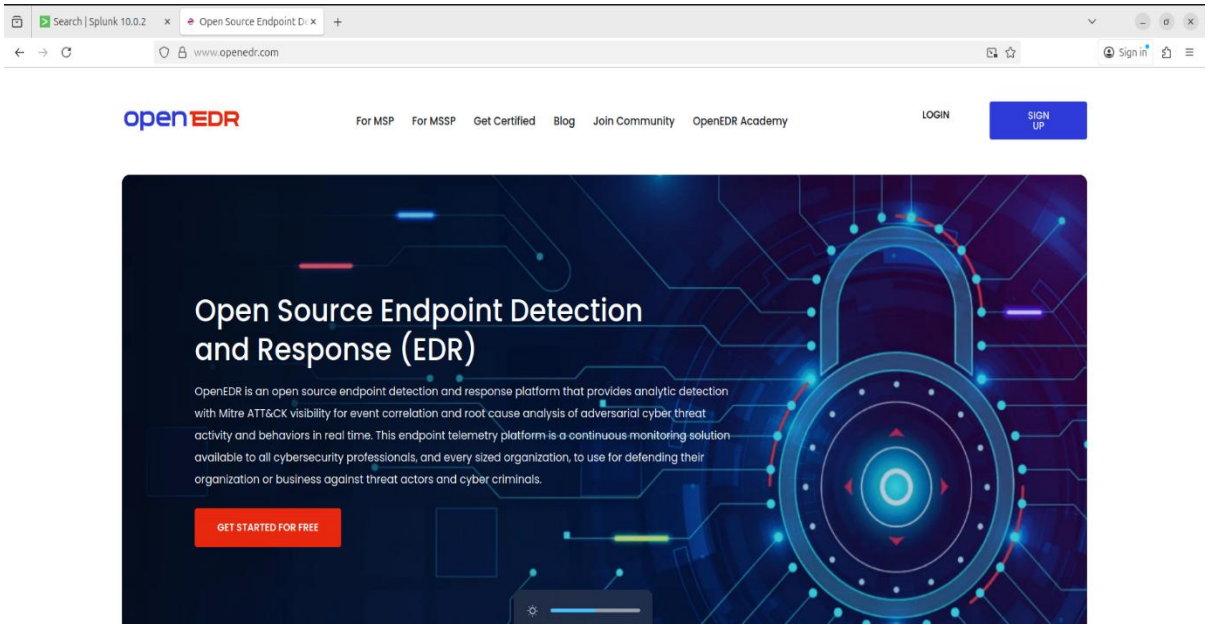
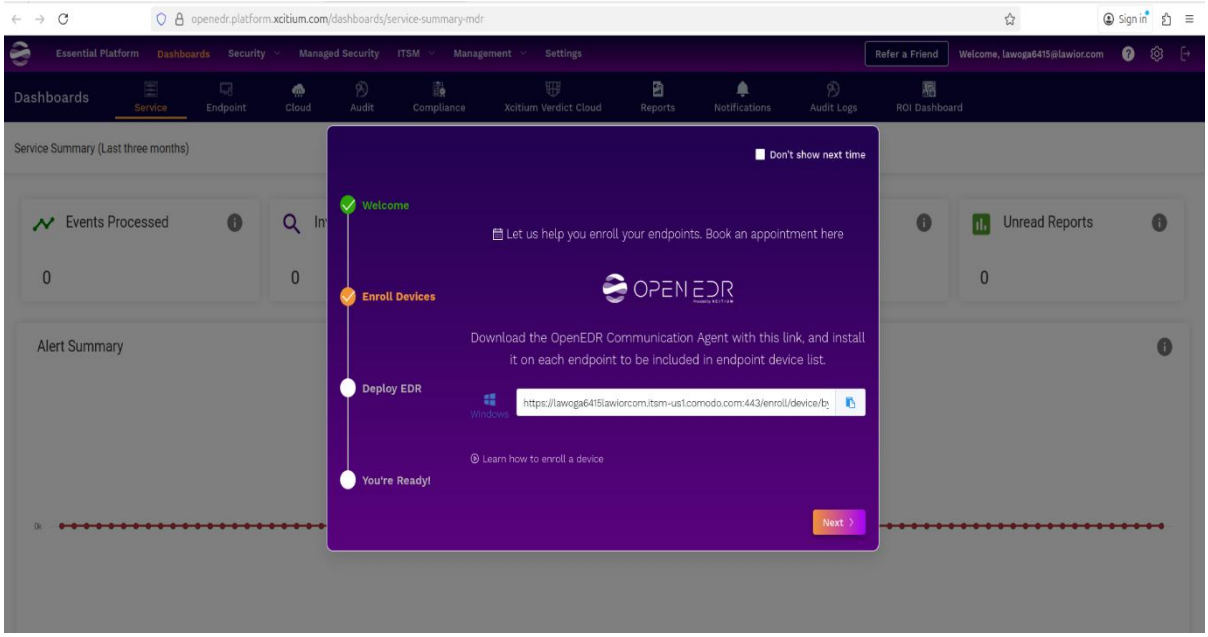
Open EDR

OpenEDR is a free, open-source Endpoint Detection and Response tool that continuously monitors endpoints for suspicious activities.
It helps security teams detect, investigate, and respond to cyber threats in real time using centralized visibility and alerts.

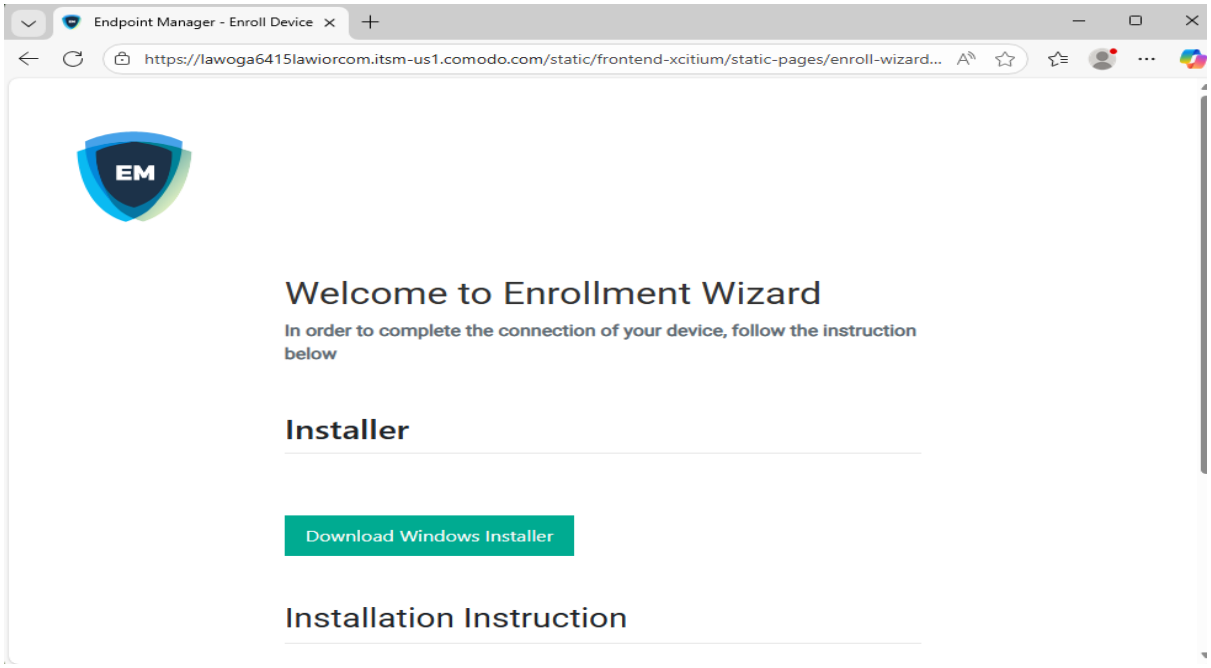


Open Open EDR Website in the Host machine and login

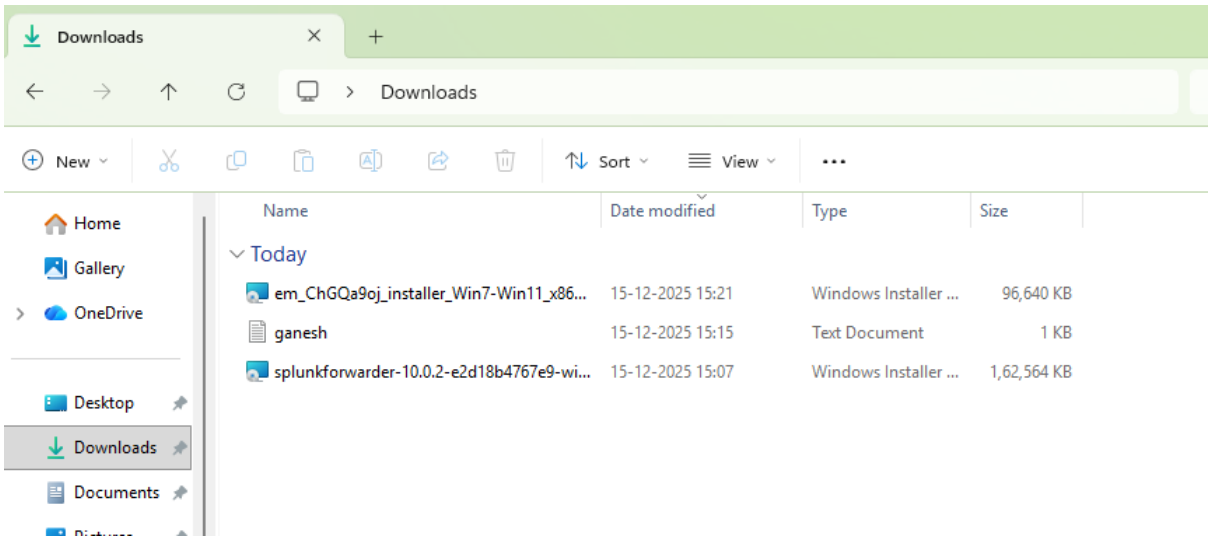


After login we get this popup. Copy the link and past in the endpoint device browser

Open EDR



Click on 'Download windows installer' the file will get download

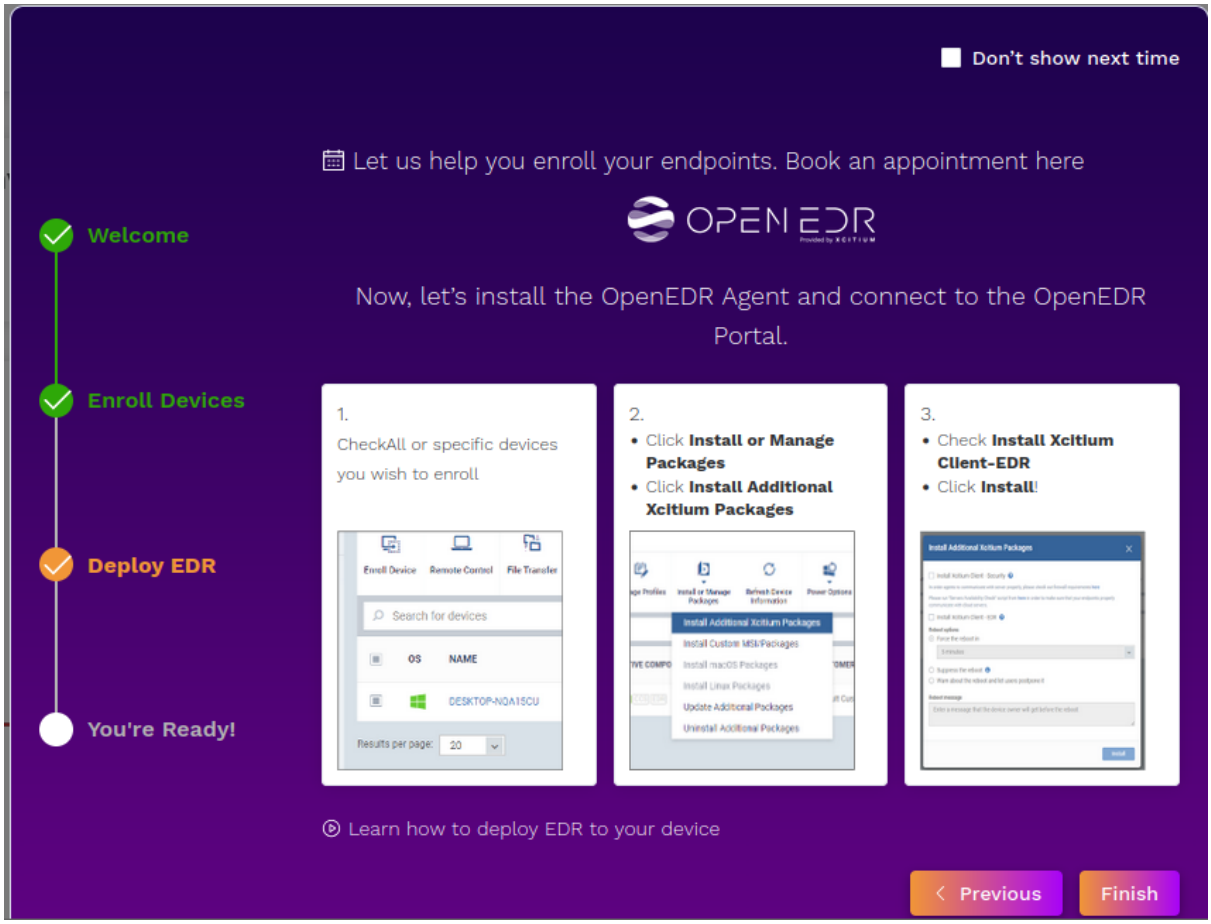


Right click on it and click on 'run as administrator'

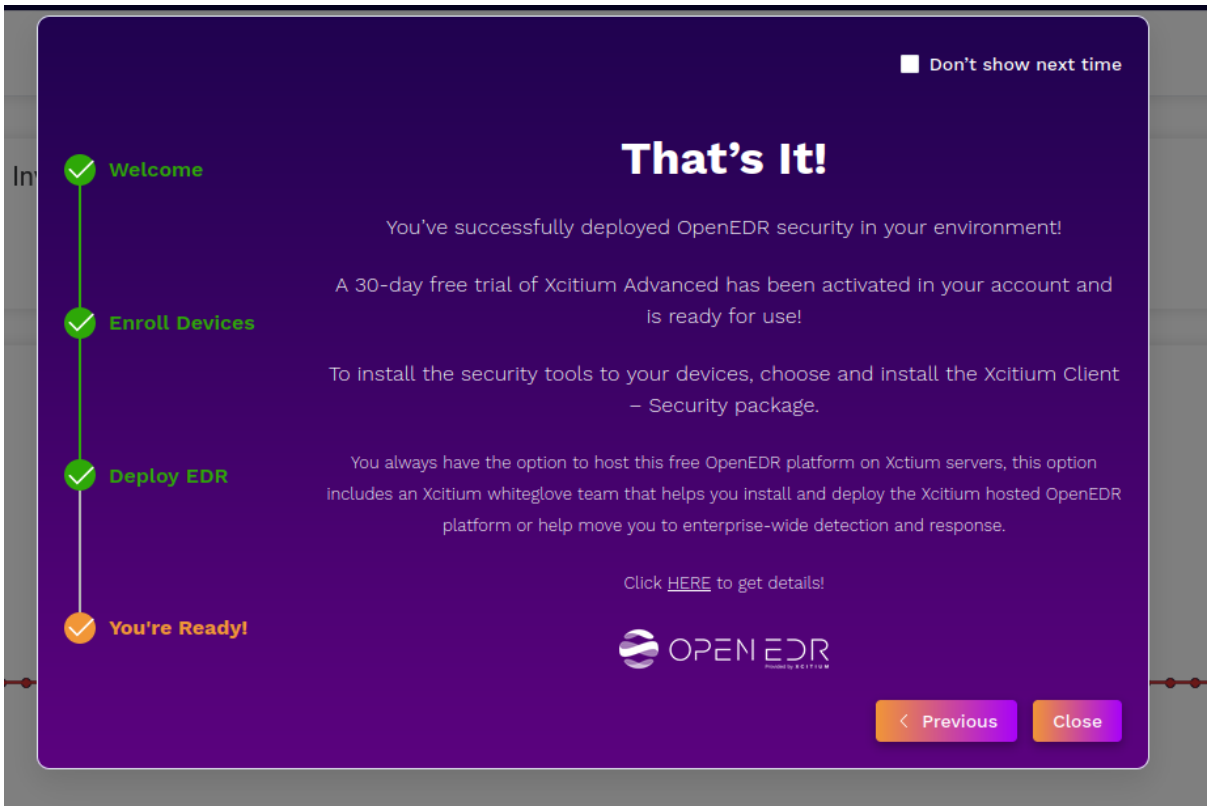
The file will get excited

Now go back to Host machine

Open EDR

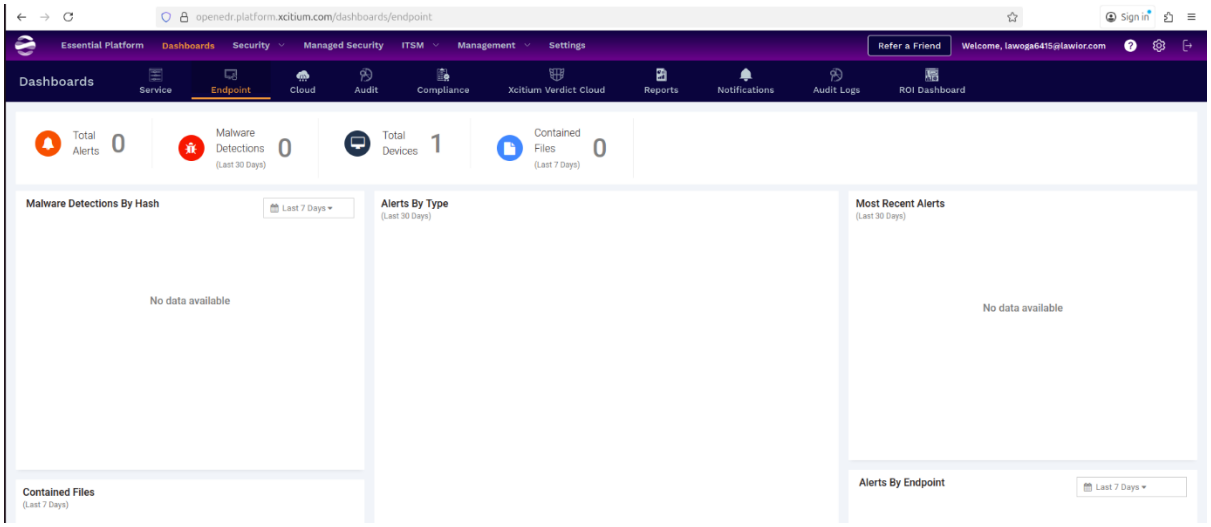


Click on finish

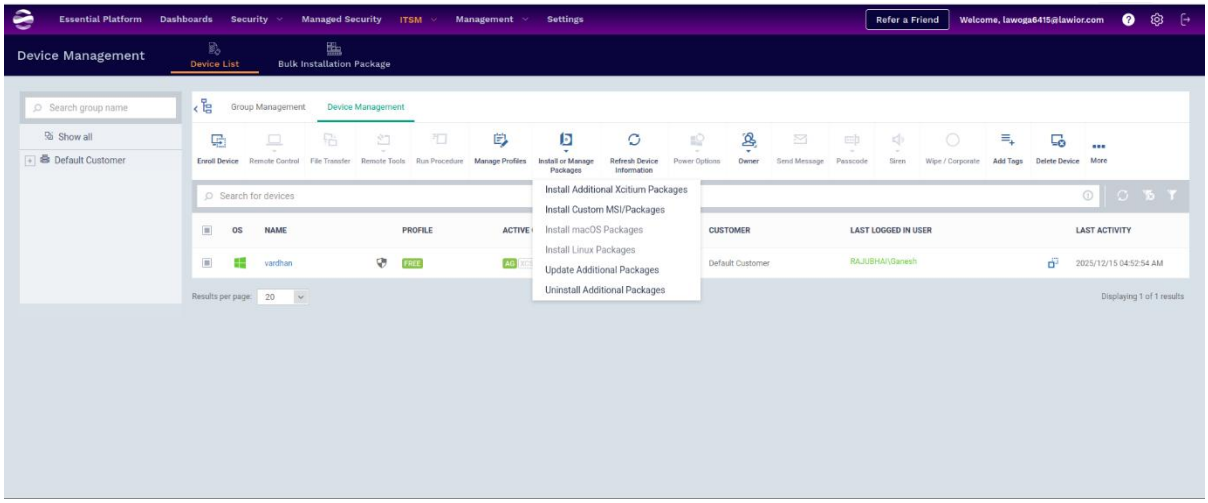


Click on close

Open EDR



Now go to 'Endpoint Tab' there we can see total devices, click on it

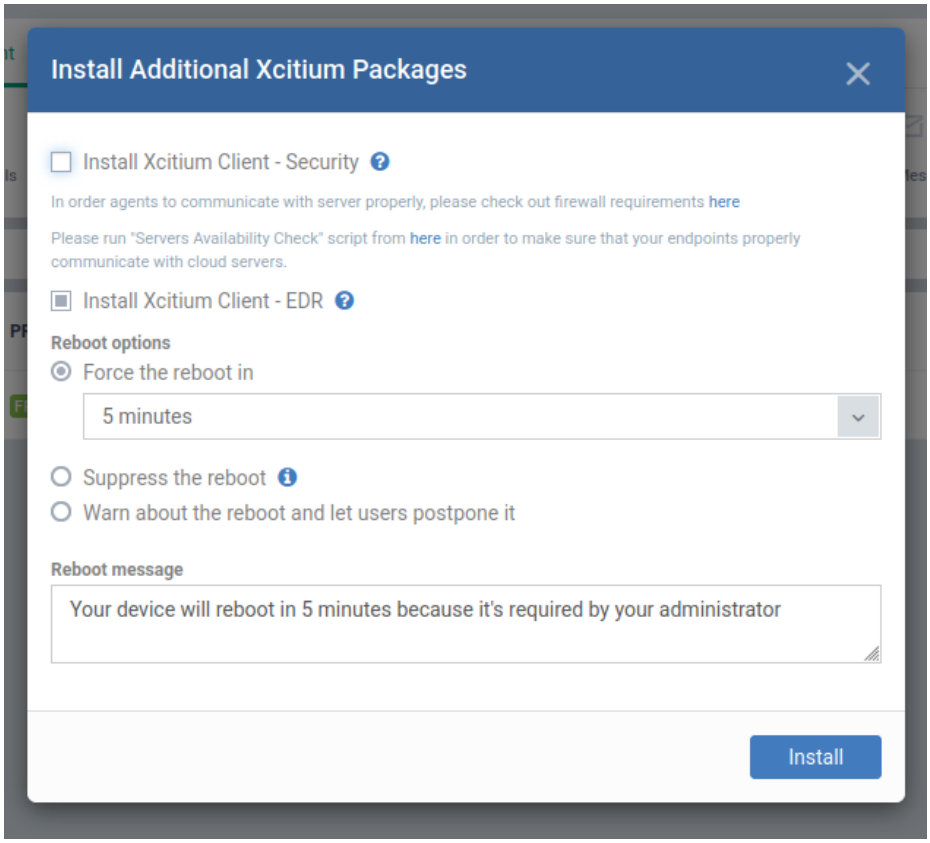


Hear we can see the windows endpoint is added

Now we have to install some EDR packegs in Endpoint device, so click on 'Install or Manage packages'

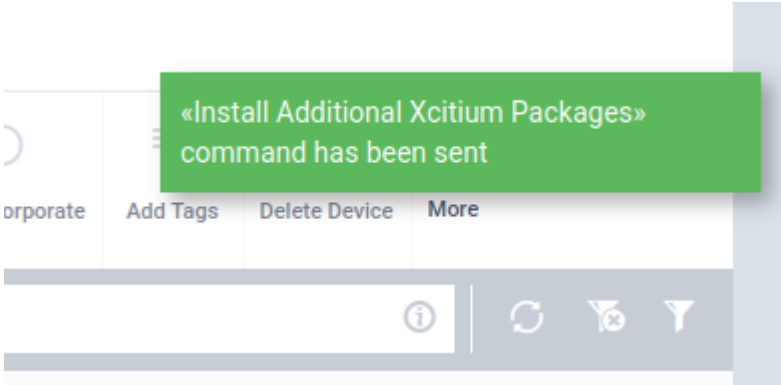
Open EDR

Click on ‘Install Additional Xcitium Packages’



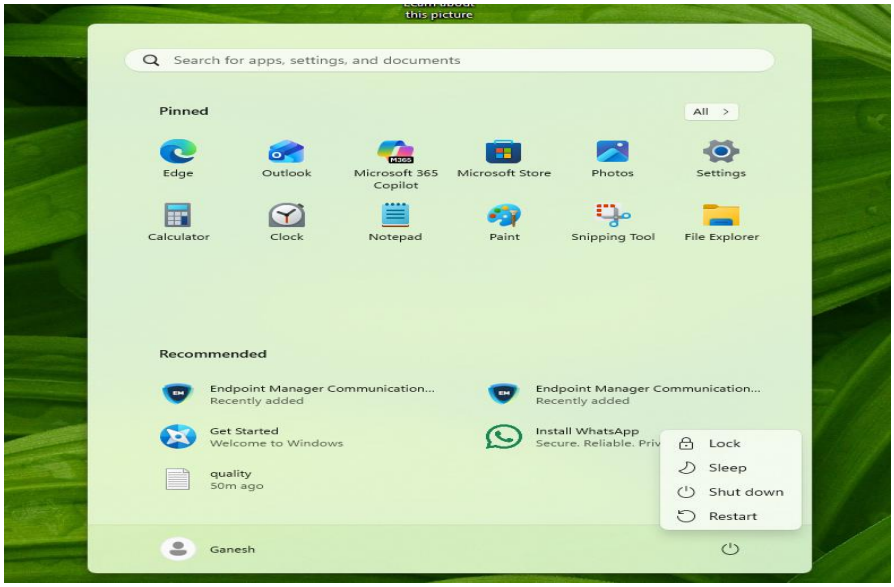
Click on ‘Install Xcitium client – EDR’ check box

Click on Install. Will get this popup



Now go to endpoint and restart it

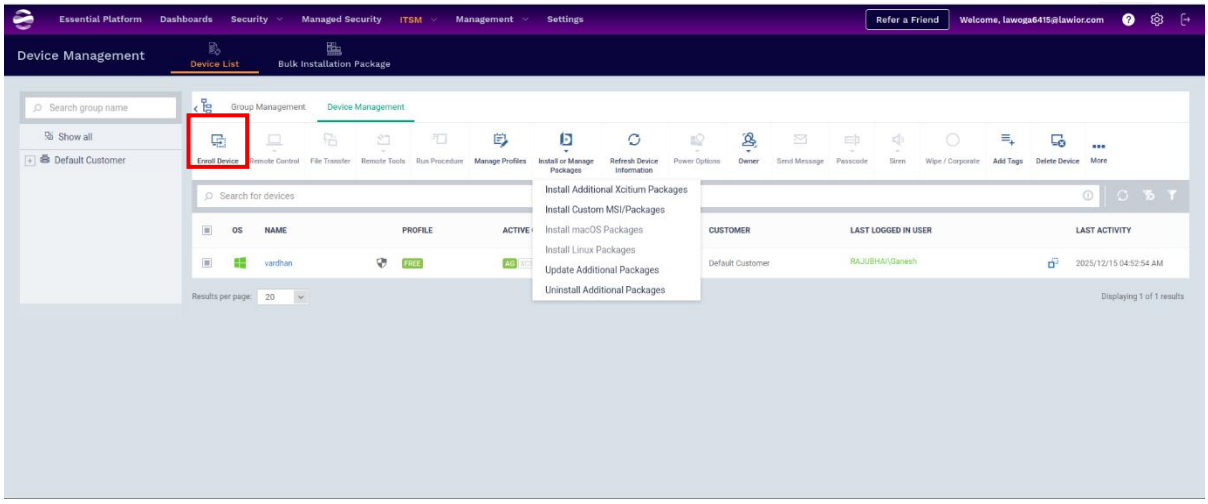
Open EDR



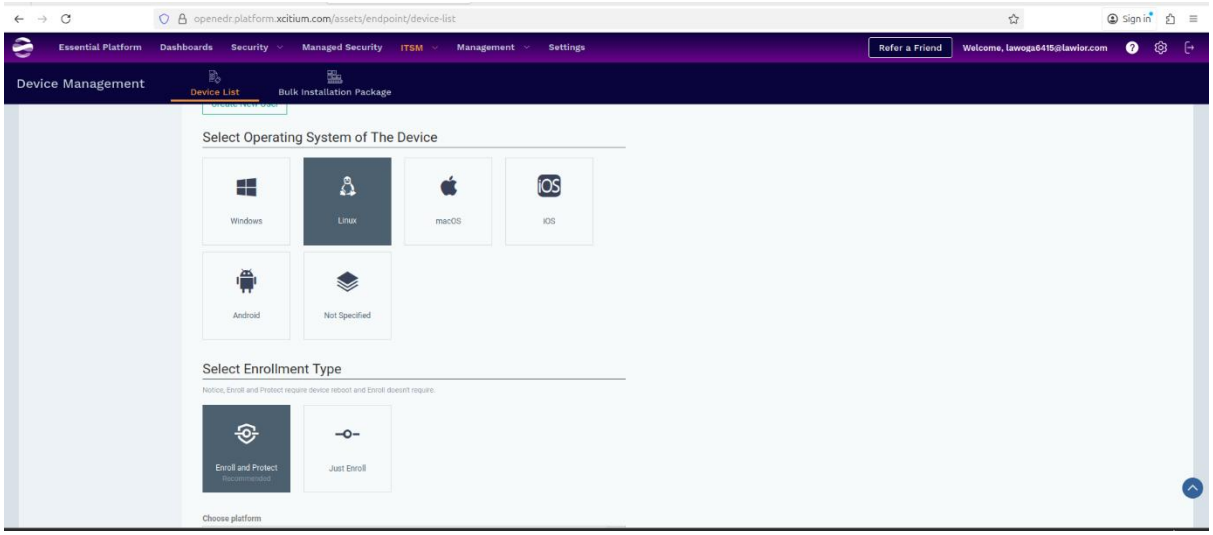
Click on restart

Now let's add a Linux machine to EDR tool

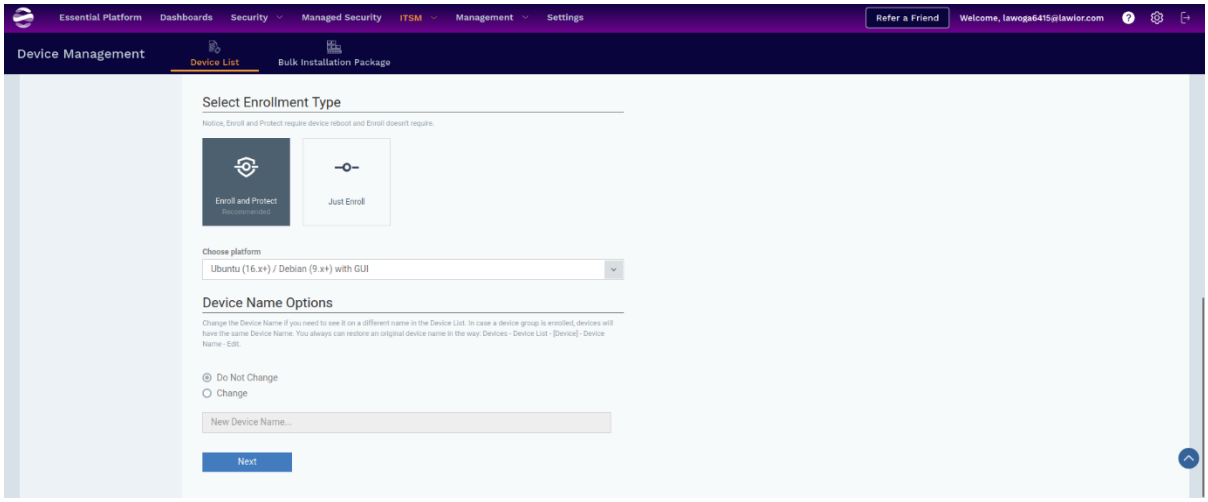
Go back to Host machine, click on 'Enrol Device'



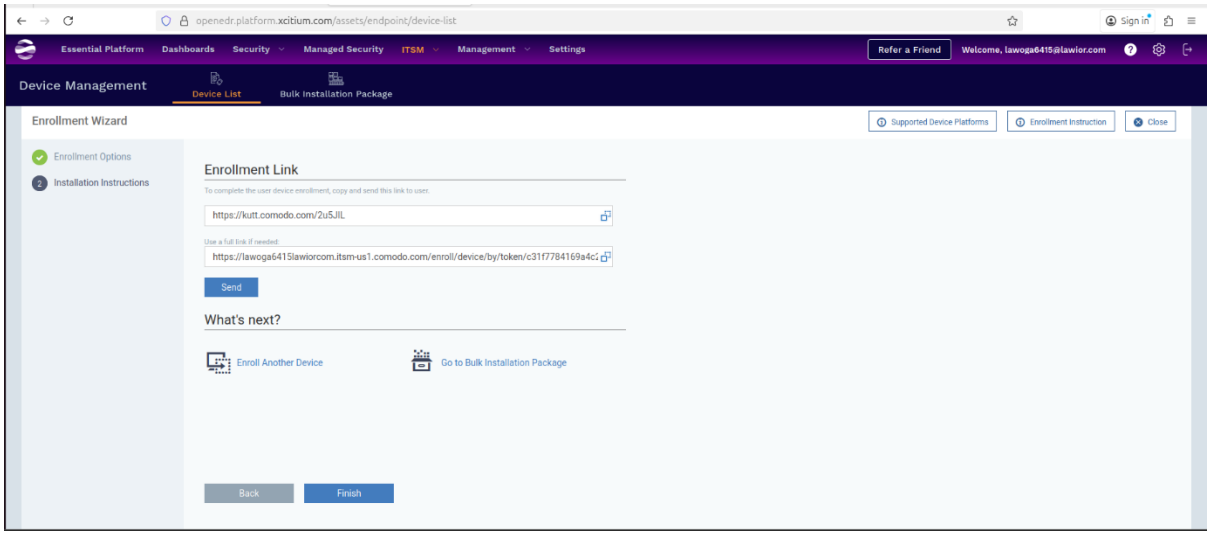
Open EDR



Select Linux and scroll down

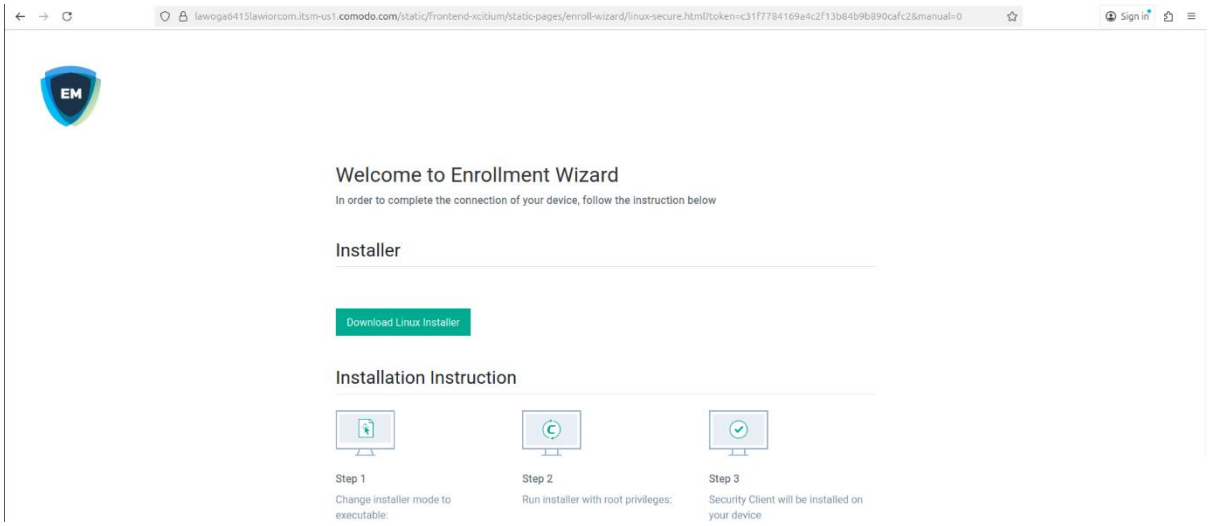


Click on 'Next'

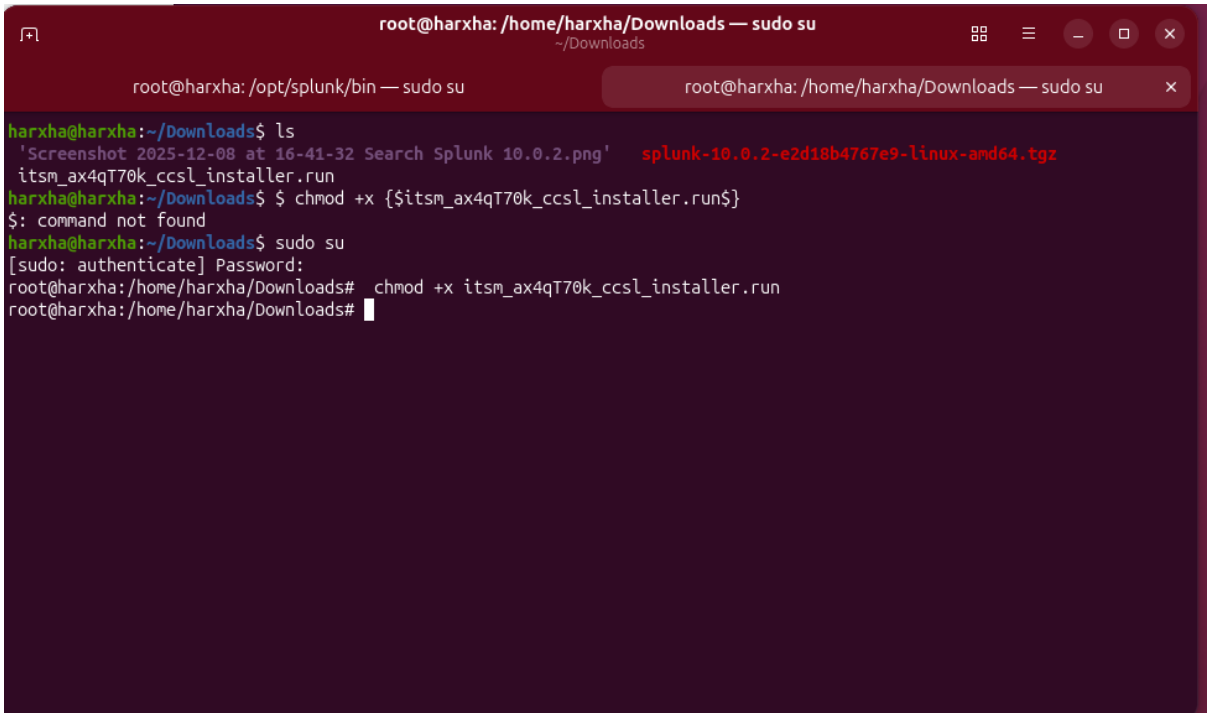


Copy the 2nd link and past it in Linux device browser

Open EDR



Click on download and open terminal



Go as root account to give permissions

Open EDR

```
harxha@harxha: ~/Downloads
~/Downloads
root@harxha: /opt/splunk/bin — sudo su        harxha@harxha: ~/Downloads
harxha@harxha:~$ cd Downloads
harxha@harxha:~/Downloads$ ls
 'Screenshot 2025-12-08 at 16-41-32 Search Splunk 10.0.2.png'   splunk-10.0.2-e2d18b4767e9-linux-amd64.tgz
 itsm_ax4qT70k_ccsl_installer.run
harxha@harxha:~/Downloads$ $ chmod +x itsm_ax4qT70k_ccsl_installer.run
```

Give the permissions to run the file

Command: chmod +x <filename>

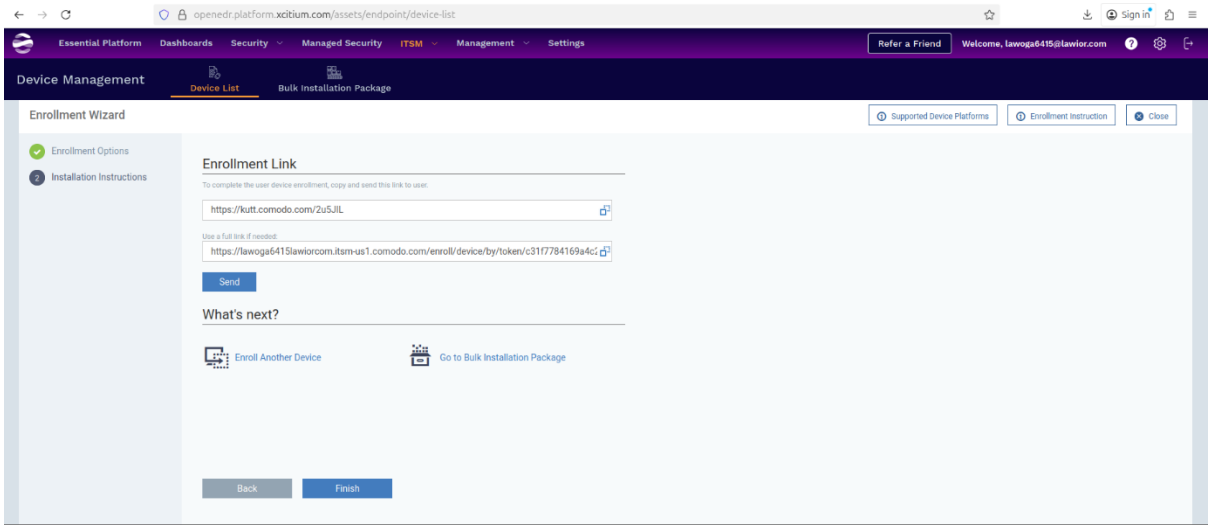
The installation will start

```
root@harxha:/home/harxha/Downloads# run apt install curl
Command 'run' not found, but there are 15 similar ones.
root@harxha:/home/harxha/Downloads#  apt install curl
Installing:
  curl

Summary:
  Upgrading: 0, Installing: 1, Removing: 0, Not Upgrading: 85
  Download size: 259 kB
  Space needed: 505 kB / 40.0 GB available

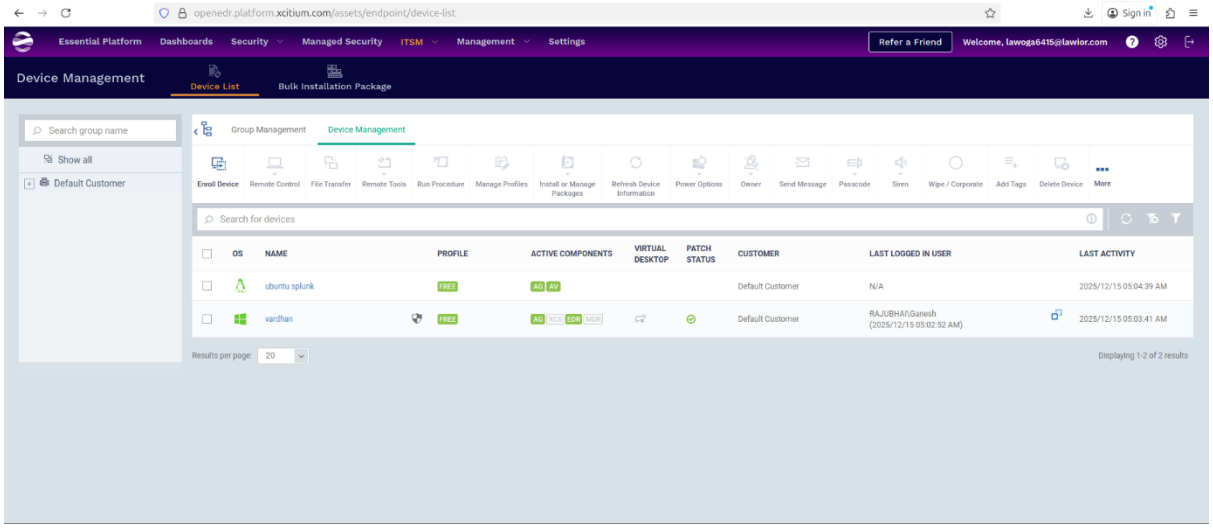
Get:1 http://in.archive.ubuntu.com/ubuntu questing/main amd64 curl amd64 8.14.1-2ubuntu1 [259 kB]
Fetched 259 kB in 1s (197 kB/s)
Selecting previously unselected package curl.
(Reading database ... 205293 files and directories currently installed.)
Preparing to unpack .../curl_8.14.1-2ubuntu1_amd64.deb ...
```

Now go back to Host machine and click on Finish

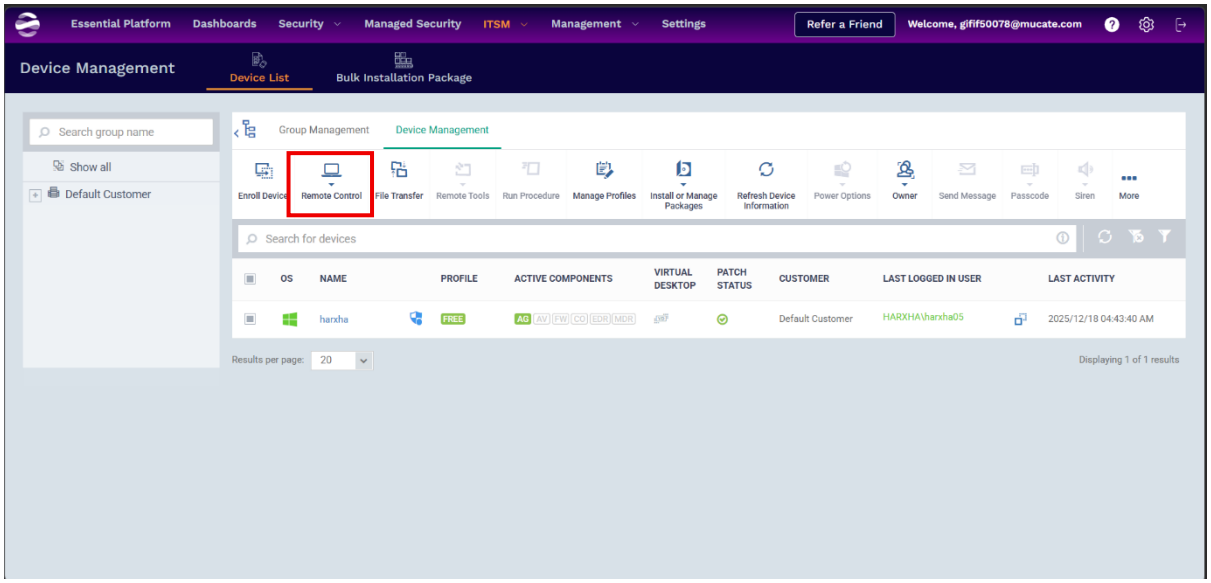


Open EDR

After the installation we can see both windows and Linux machines in Endpoint tab

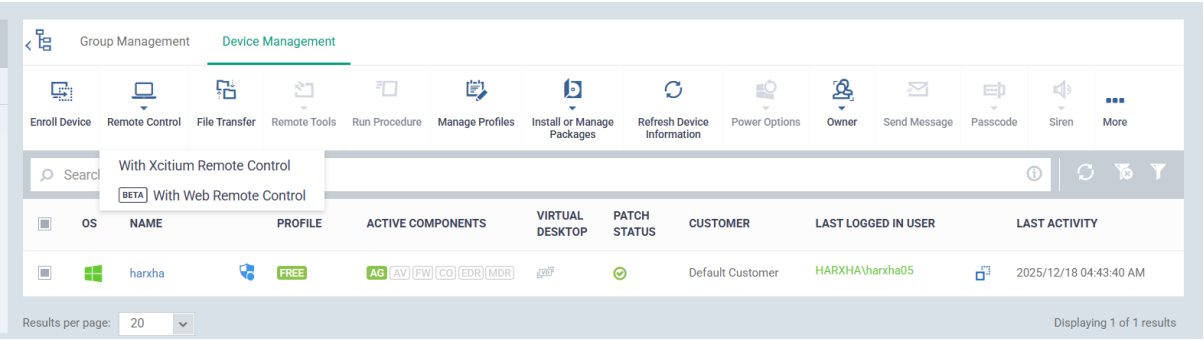


In ubuntu we can only get logs, isolation option.



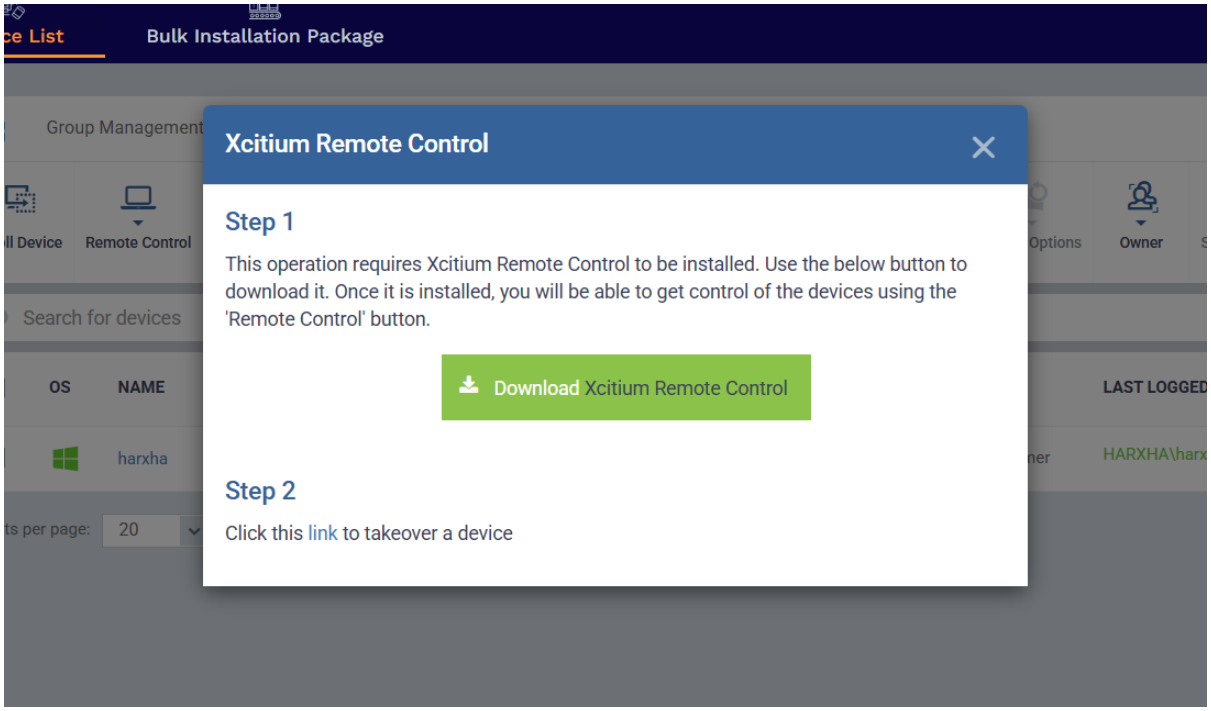
In windows we can get isolation, remote access, file transfer, windows activity logs, etc

First, to get remote access select on the device and click on remote control

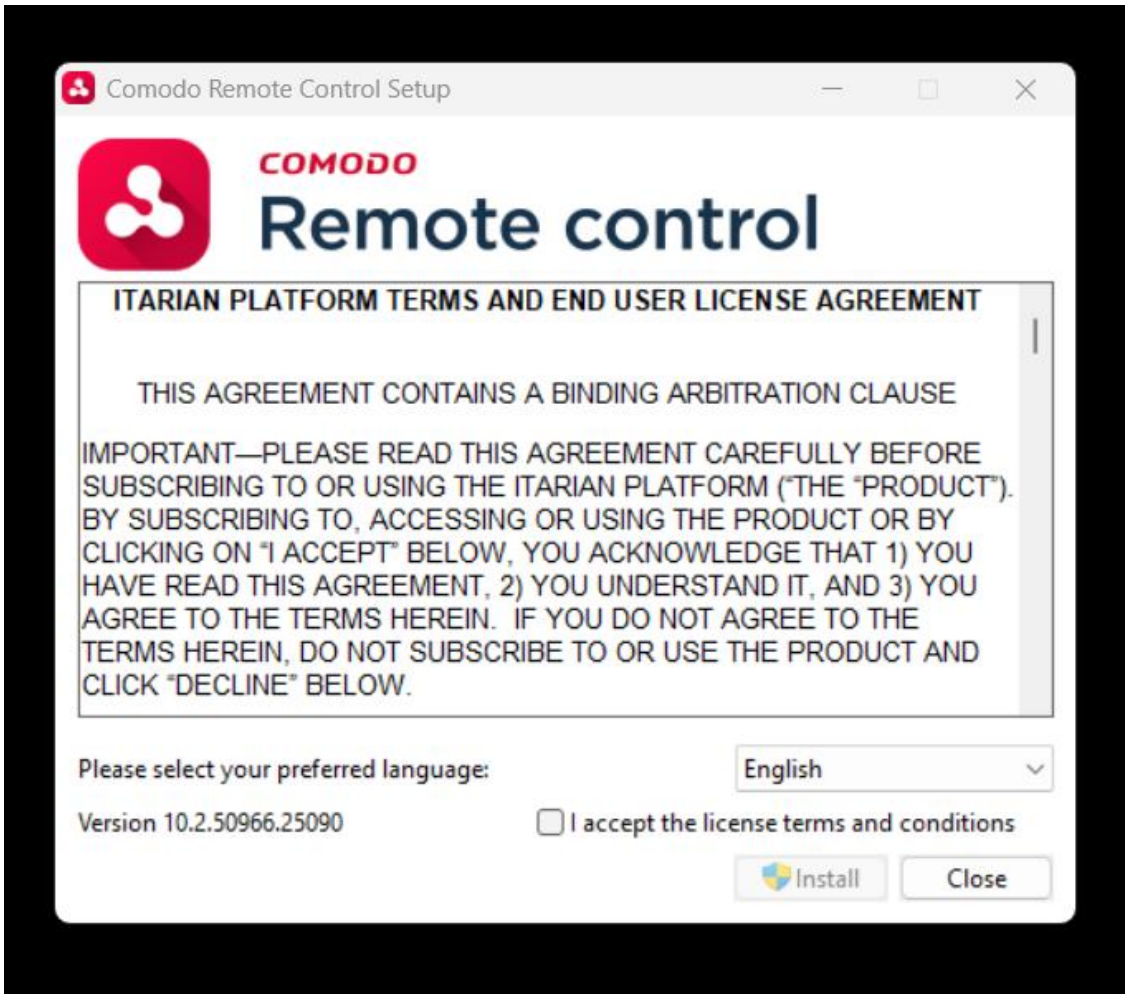


Click on ‘With Xcitium Remote Control’

Open EDR

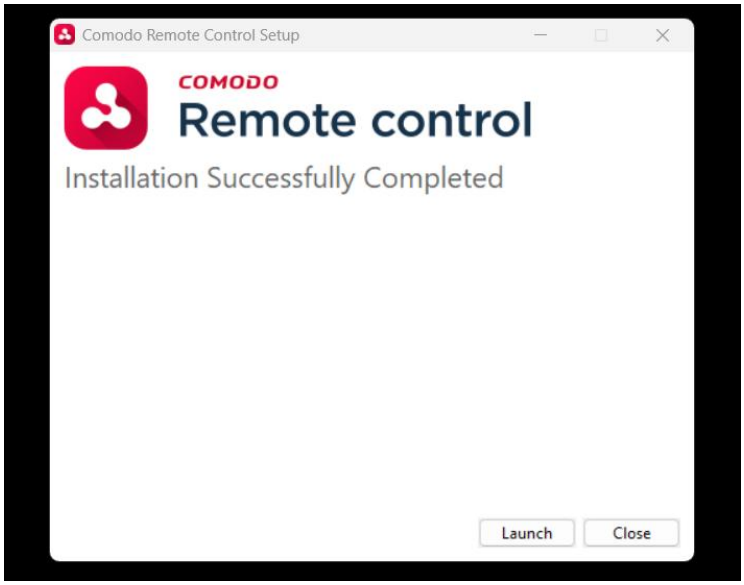


It will ask you to download the application, download and run it

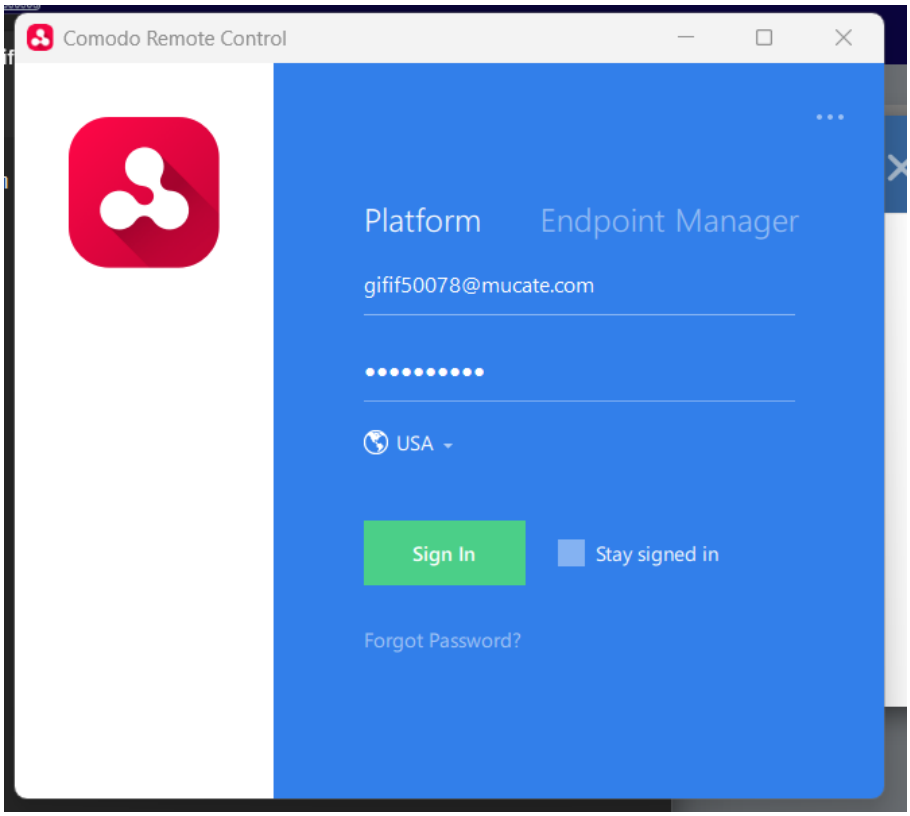


Click on agreement licence and install

Open EDR



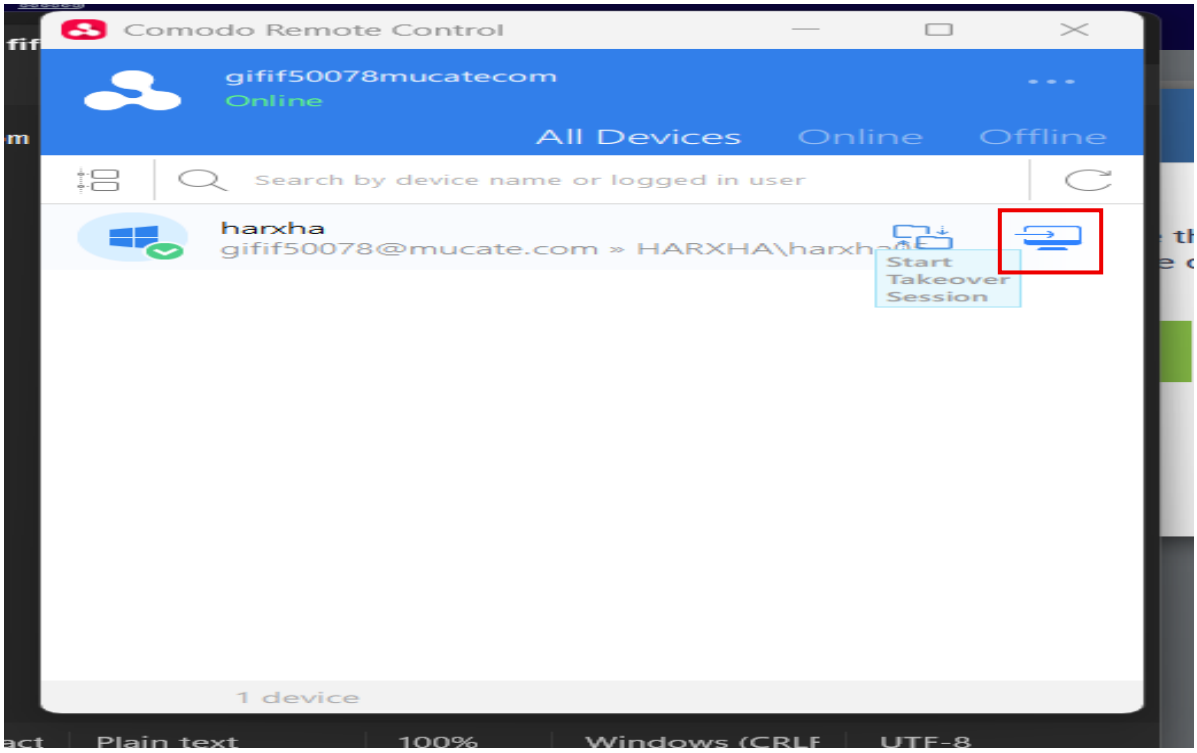
Click on launch



Login the device with Open EDR account email and password

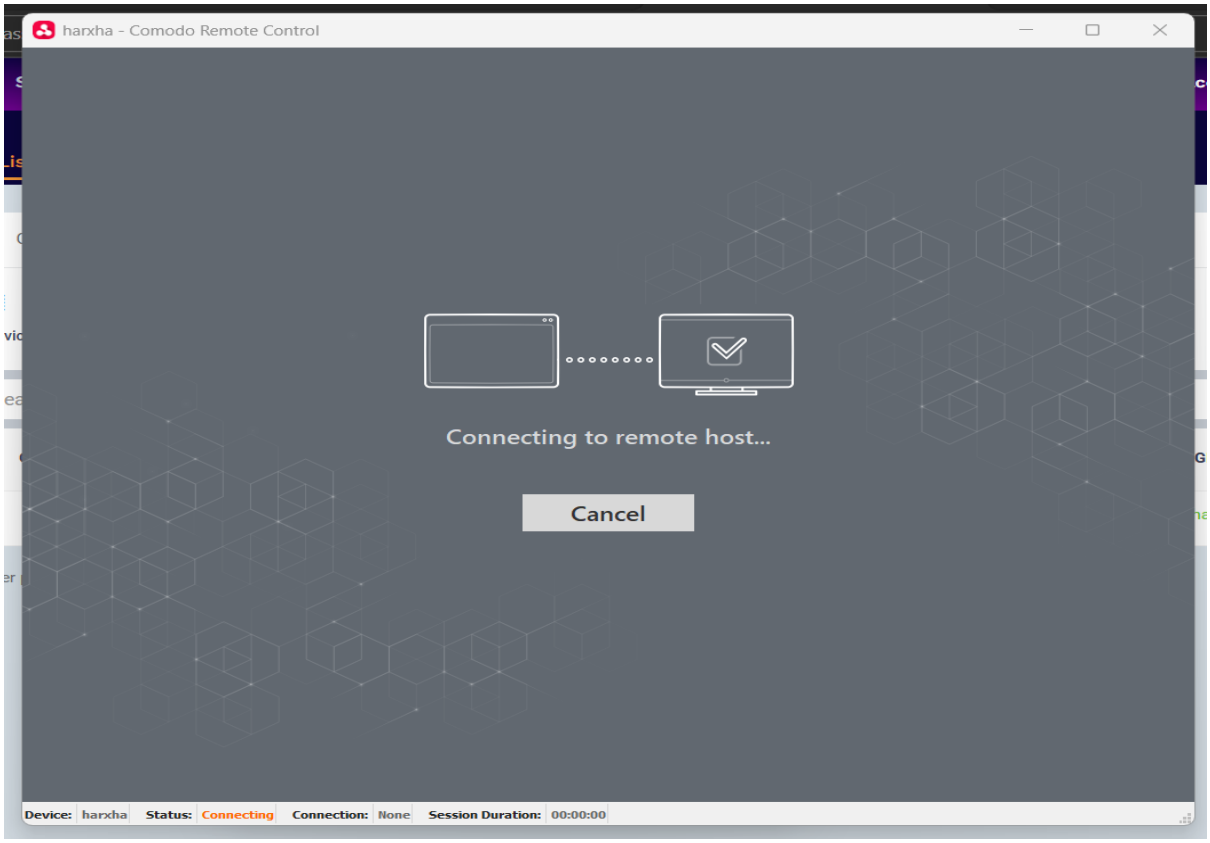
Choose country USA (very important)

Open EDR



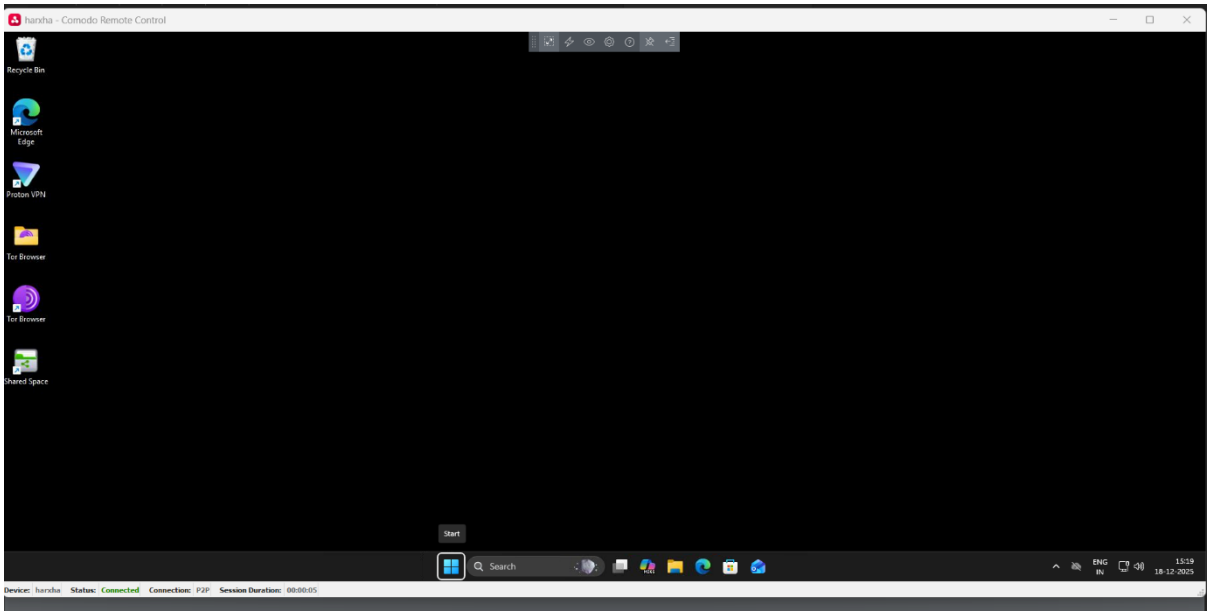
Hear we can see the already enrolled devices in EDR

Click on monitor option for Remote access

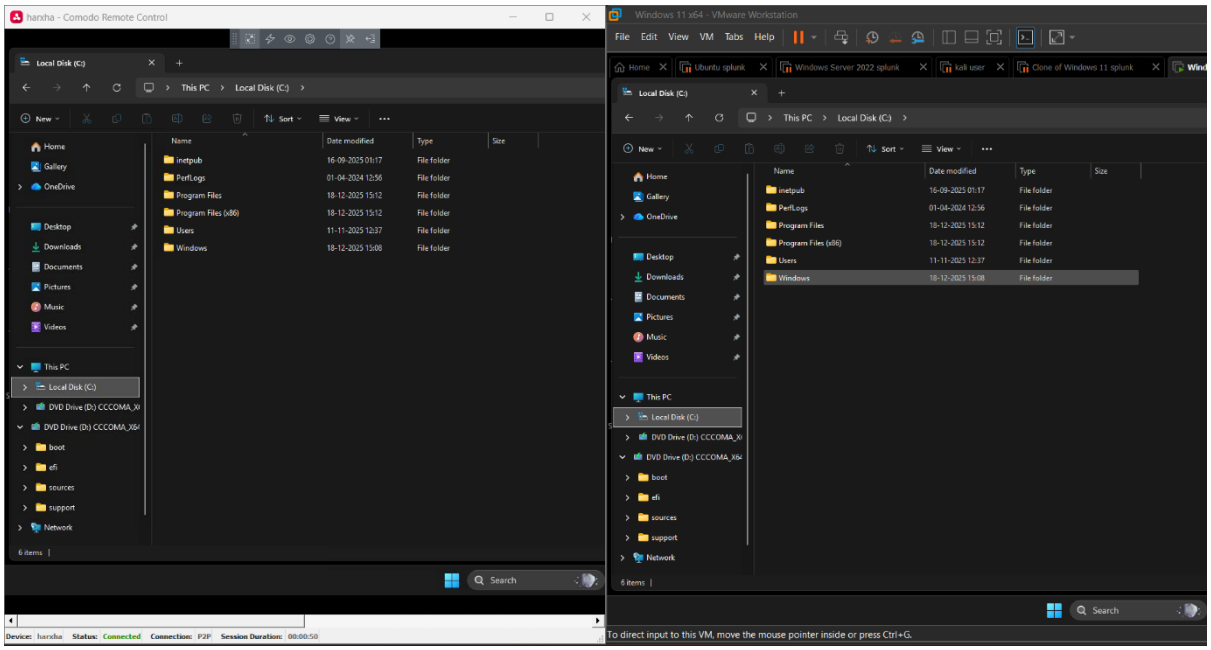


Wait till the connection build

Open EDR



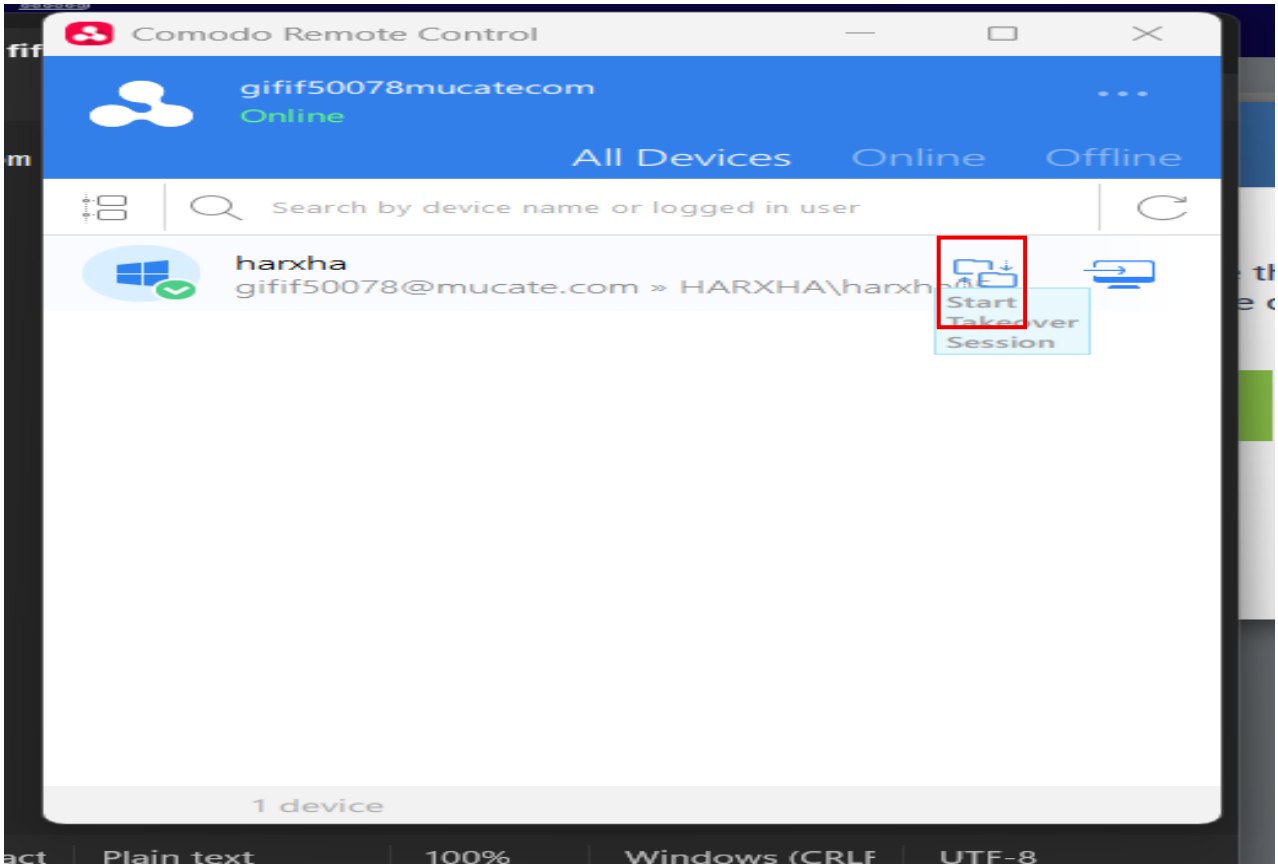
Hear we get RDP connection



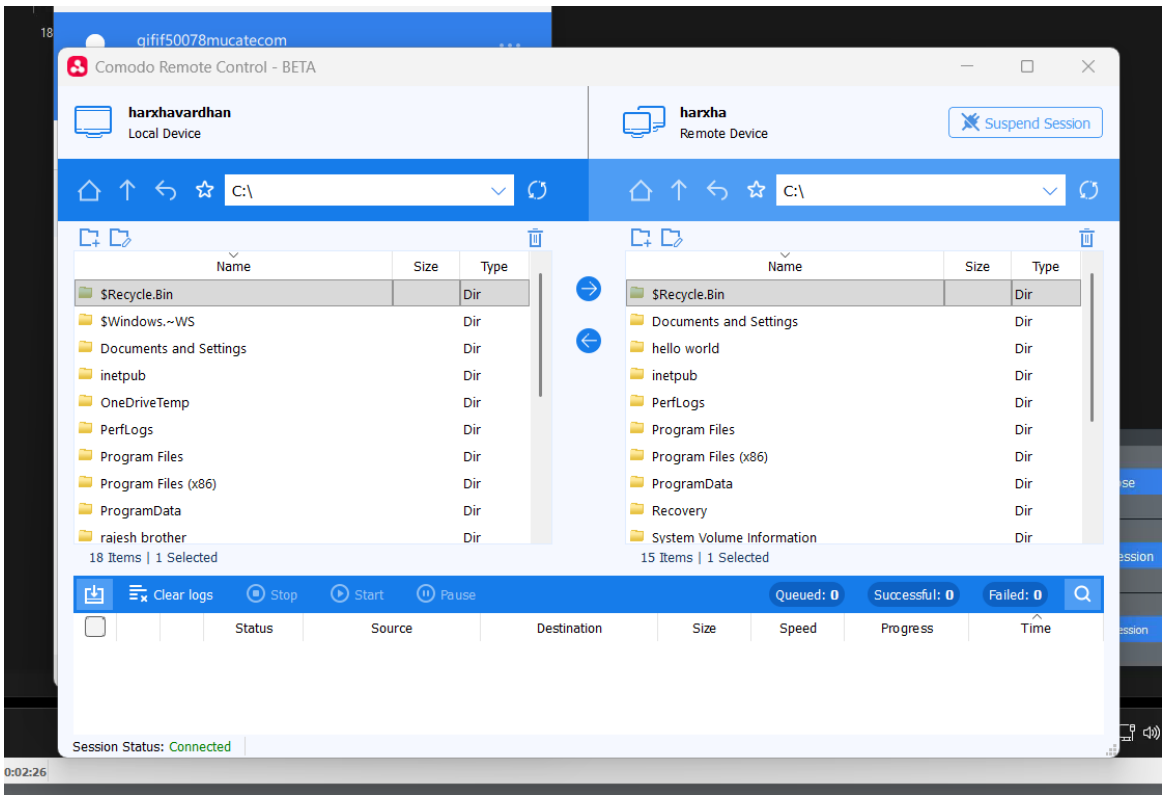
Hear we can see the Endpoint and RDP connection from Host machine

Open EDR

Now lets do file transfering, file editing, file creating wether its working or not

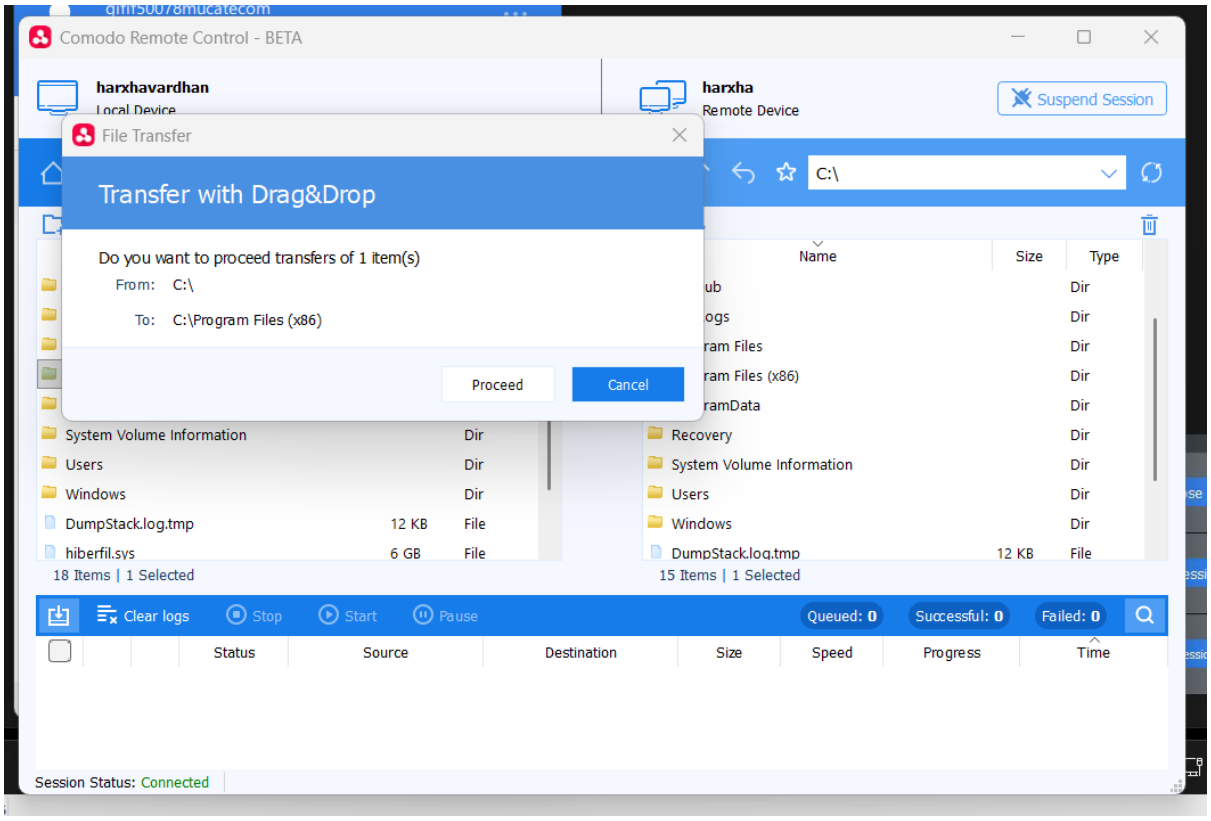


Click on the file transfer option

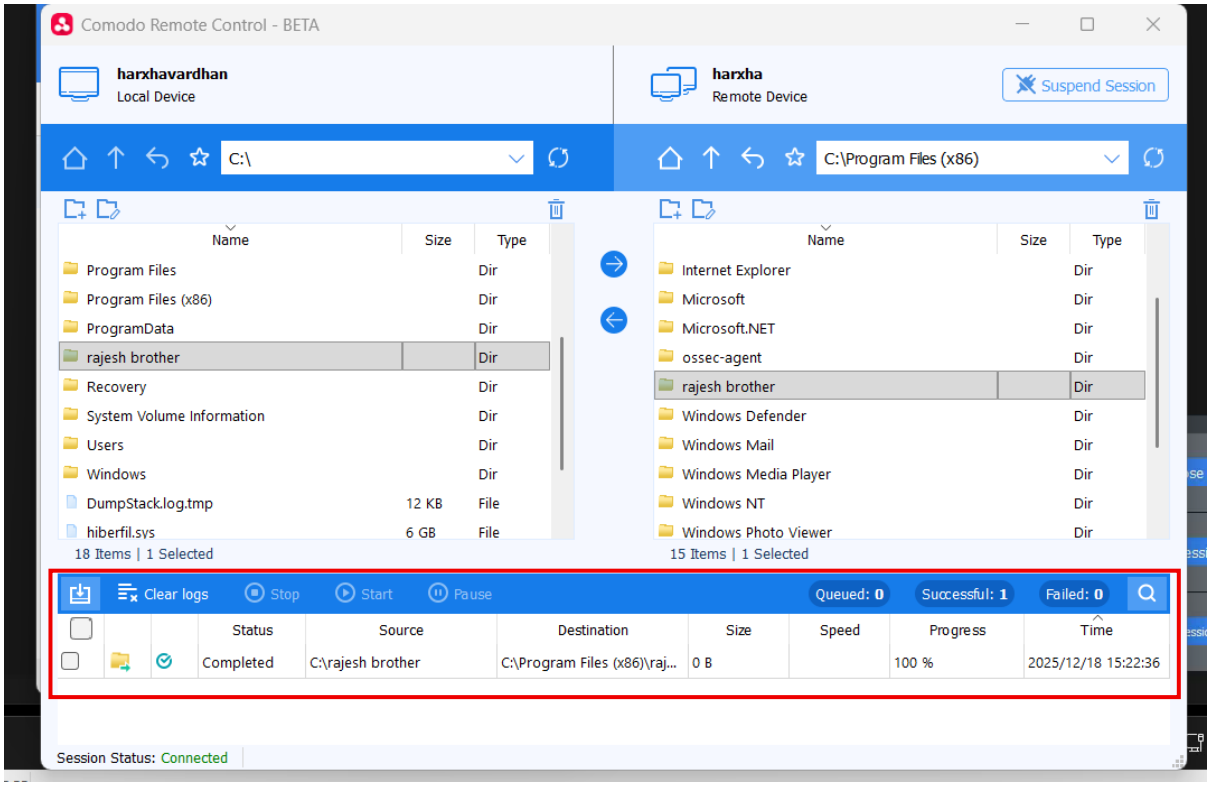


Hear we can see the Host machine on left and Endpoint machine on right

Open EDR



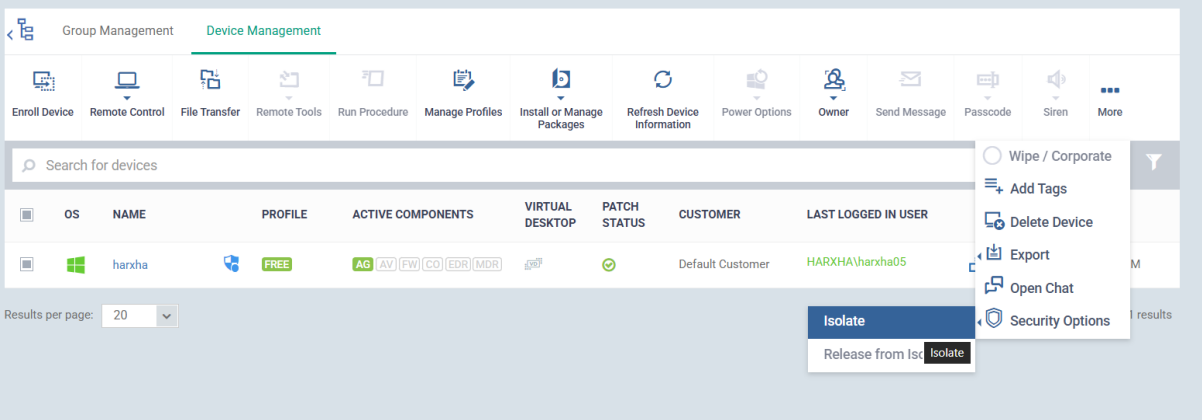
Hear I created a file in host machine and transferred it into endpoint



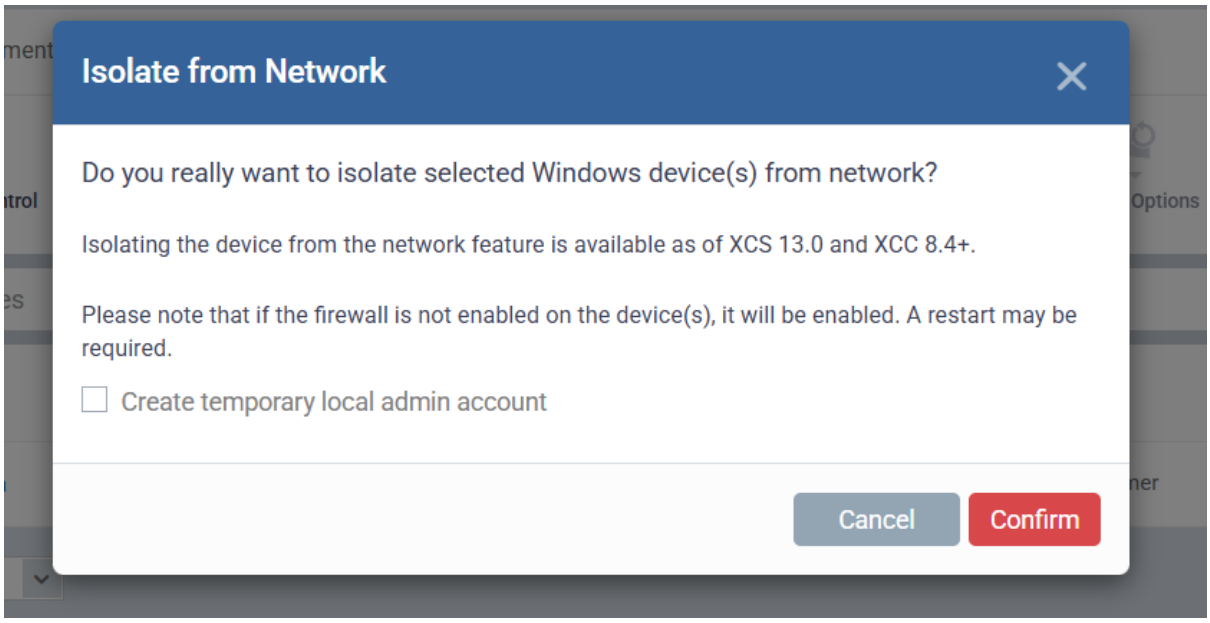
Hear we can see the information about file transfer. And the file is transferred into Program files. The files are getting transferred from one device to another

Open EDR

Now lets check the isloation process in Endpoint



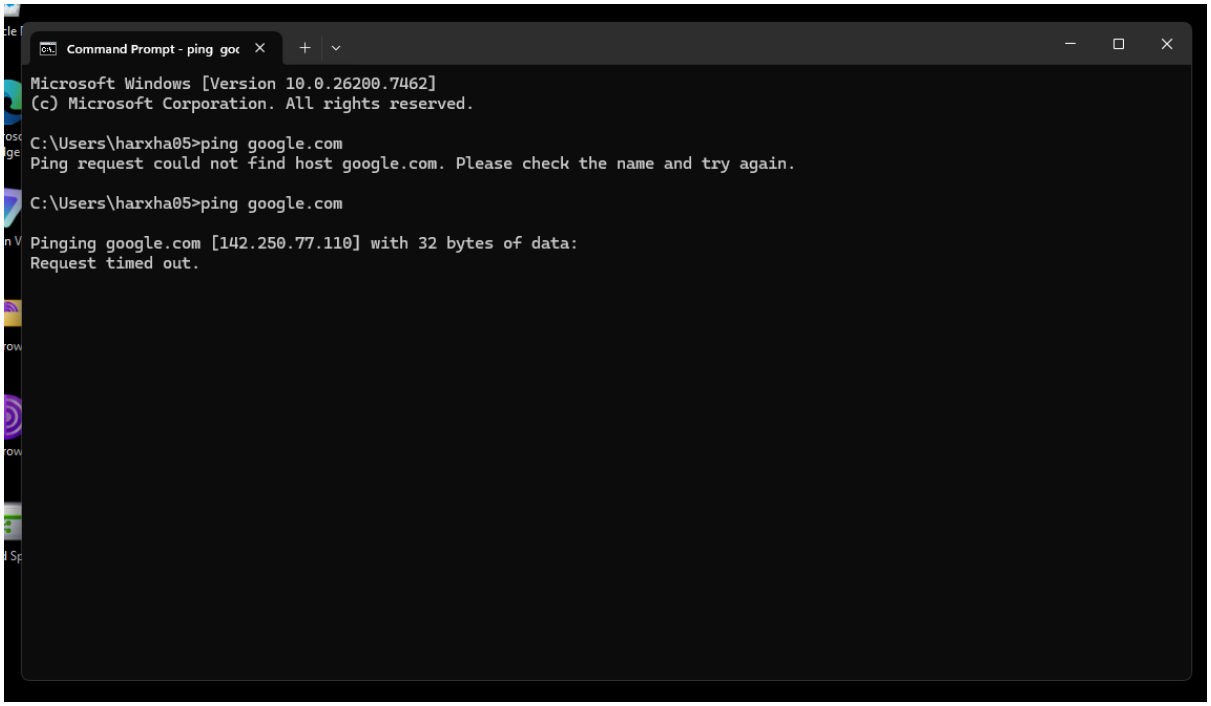
Select the device and click on 'More' tab and click on 'Security options' and click on 'Isolate'



Click on 'Confirm'

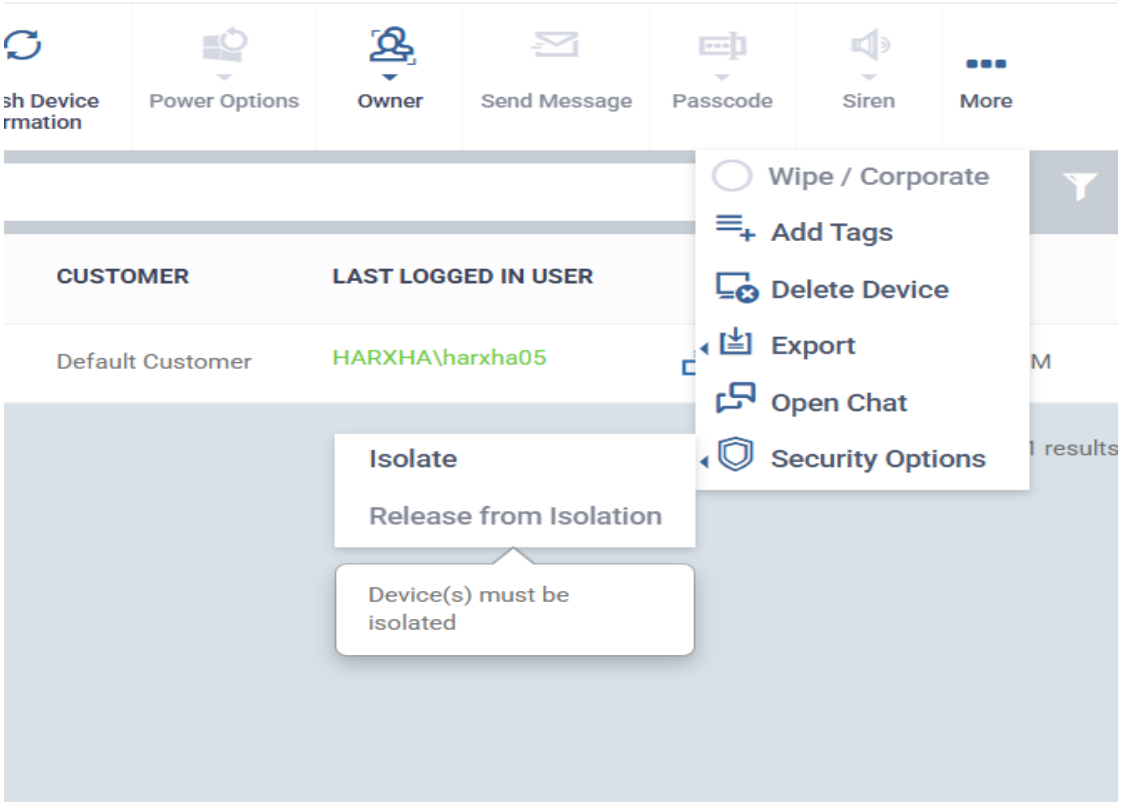
Now the Endpoint is removed from network(cantainment) lets check in Endpoint

Open EDR



Open Command prompt and try to ping any website, I tried google.com

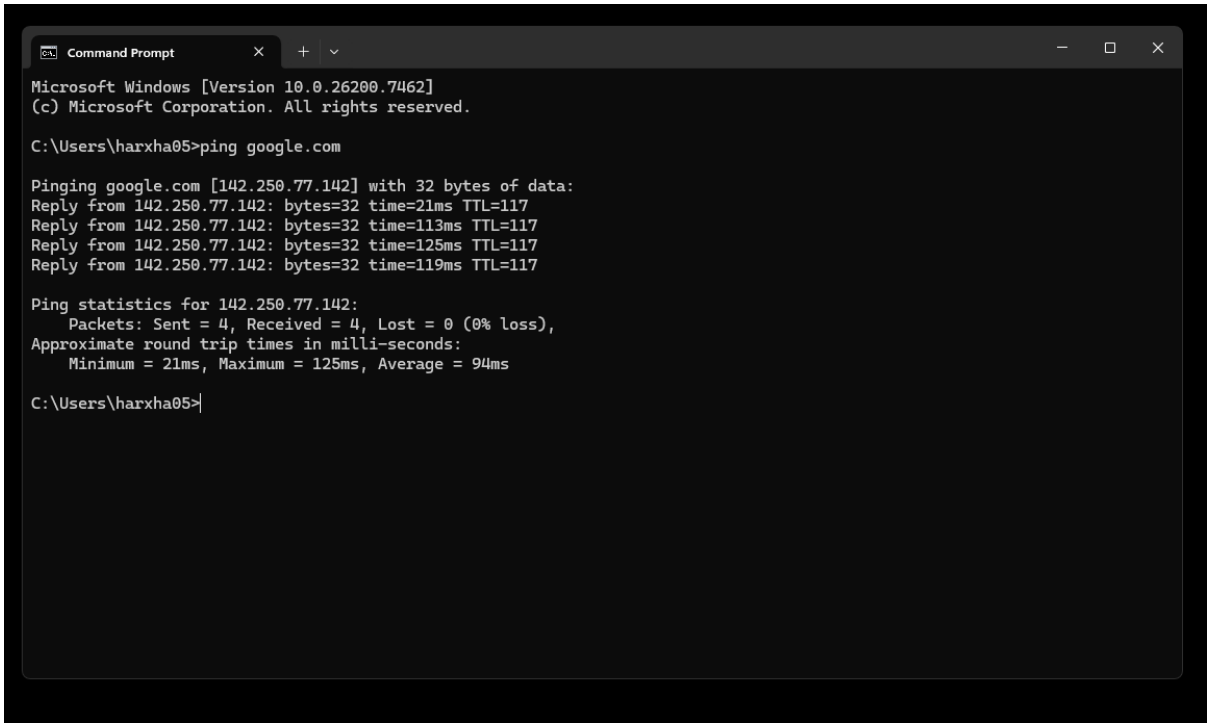
The reques is not going becouse, the Enspoint is out of network



The ‘Relese form isloation’ option will avalable click on it

Try to ping for any website in Endpoint

Open EDR

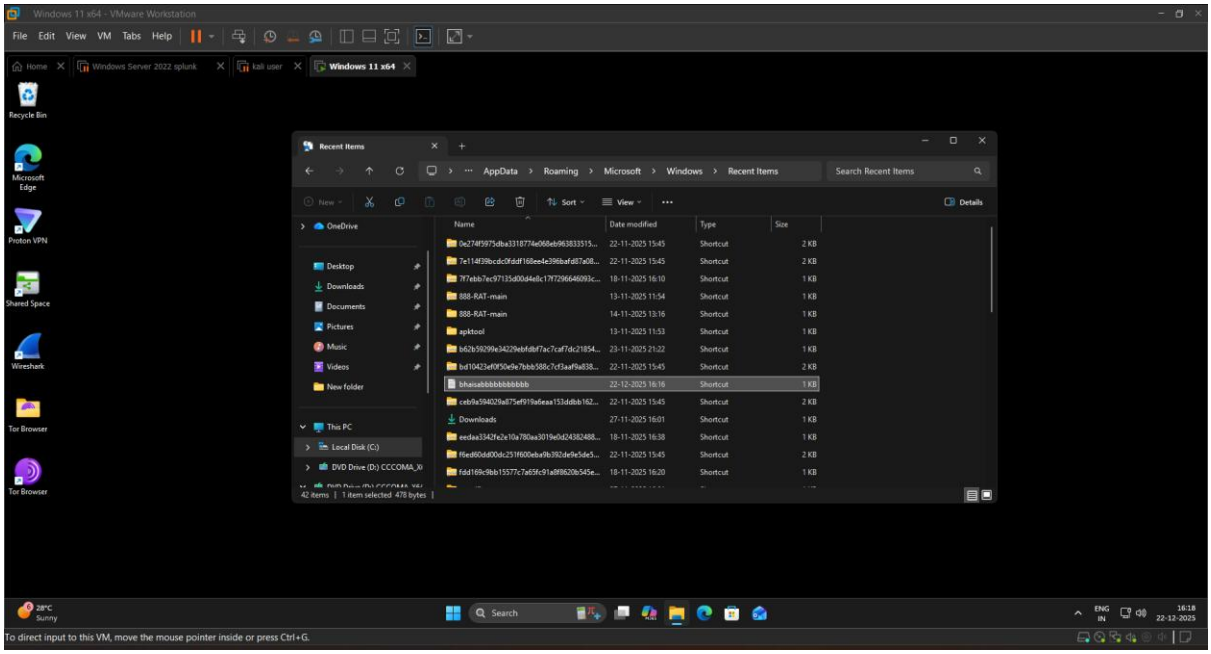


Now the requests are going. The Endpoint is back to the network

Open EDR

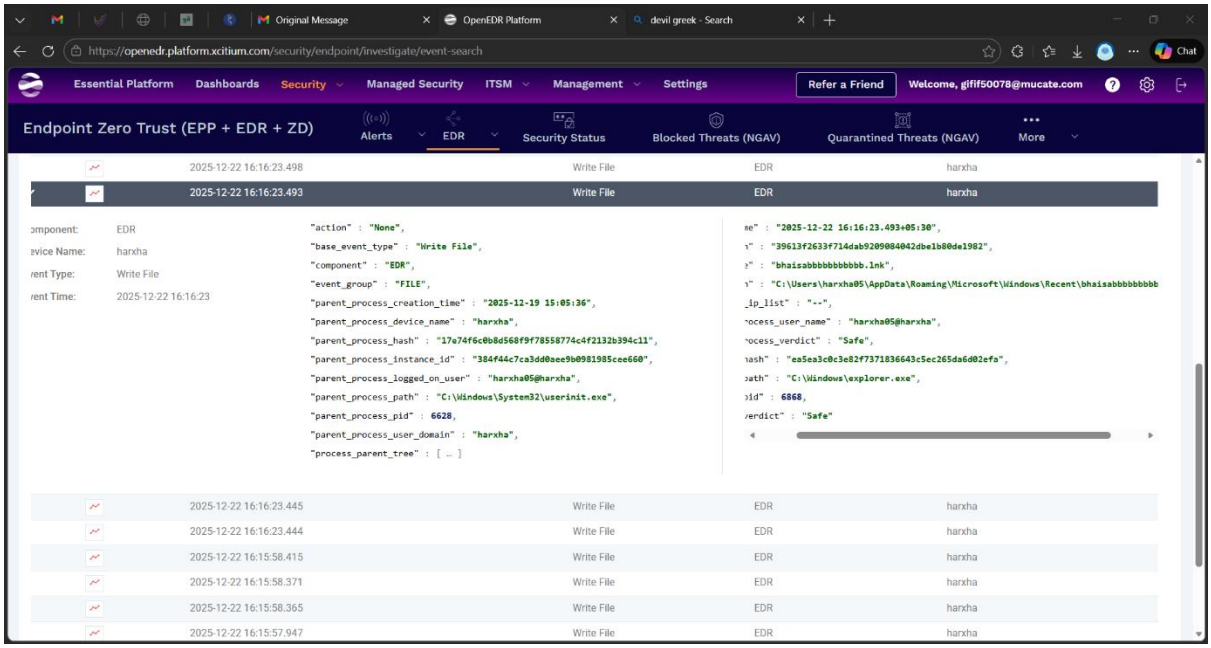
Lets check the file creation logs

I have created file in Endpoint



Lets check the file creation log in Host machine

Go to ‘Security tab’ and click on ‘EDR tab’ and searh log as per timestamps



Hear is the log from Ednpoint for file creation
